What is Impotence?

Impotence is the inability to achieve and maintain a satisfactory erection to complete intercourse. Numerous physical conditions such as prostate disorder, high blood pressure and diabetes can cause impotence. Even poor diet, years of smoking or medications can affect a man's ability to achieve or hold an erection.

It is easy to understand why 30 million American men have erectile dysfunction. The American Urology Association's clinical panel on treating impotence has recommended vacuum therapy as a safe and effective non-invasive treatment.

How Does The Encore System Work?

This device will create an immediate strong erection for 90% of all men regardless of the underlying cause of the problem. Vacuum therapy creates an erection by placing the penis in a cylinder which draws blood into the erectile tissues mimicking the natural process. The erection can be maintained by a specially designed ring placed by the patient around the base of the penis.

Medicare Patients - Vacuum Therapy is a Covered Benefit!!

Medicare patients who have Medical Insurance, (Medicare Part B), can receive our Deluxe Vacuum System by mailing us the following information:

- 1) Please complete both sides of this brochure.
- 2) Include your doctor's prescription or have your doctor sign below.
